

MYTIME

MYDATE

racetime / enddate

RFID\_CR500

```
graph BT; RFID_CR500[RFID_CR500] -- "racetime" --> MYTIME[MYTIME]; RFID_CR500 -- "enddate" --> MYDATE[MYDATE];
```

The diagram illustrates a data flow from a source table, RFID\_CR500, to two target tables, MYTIME and MYDATE. The source table is represented by a grey rectangle at the bottom, while the target tables are white rectangles at the top. Two purple arrows originate from the source table: one labeled 'racetime' points to MYTIME, and another labeled 'enddate' points to MYDATE. The labels 'racetime' and 'enddate' are positioned between the source and target tables, with short purple line segments connecting them to the arrows.
